Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Quantum Dot Film and Diffuser Plate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Quantum Dot Film is a functional film embedded with quantum dot nanomaterials, converting colors via excited luminescence. Used in LCD backlights or QLED displays to enhance color gamut and brightness. Materials include cadmium-based, InP, perovskite, etc., in single/multi-layer structures. Quantum Dot Diffuser Plate (QD-DP) is a component used in display technology that combines quantum dots with a diffuser plate to enhance light diffusion and color rendering. Quantum dots are semiconductor nanocrystals that can convert incoming light into different, more precise colors, while the diffuser plate ensures even light distribution. This technology is used to improve the color gamut, brightness, and energy efficiency of displays.

The global Quantum Dot Film and Diffuser Plate market size was estimated at USD 464.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.80% during the forecast period.
