Report Overview

A quarter-wave mirror, also called a Bragg mirror, is usually a dielectric mirror (or semiconductor mirror) structure which consists of an alternating sequence of layers of two different optical materials, with each optical layer thickness corresponding to one-quarter of the wavelength for which the mirror is designed. Here, the wavelength is taken to be the wavelength within the material, not the vacuum wavelength. For a given wavelength and number of layer pairs, a quarter-wave mirror is the structure which can result in the highest reflectivity.
