## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Quartz Glass Mask Blanks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The mask plays the role of a basic template for pattern transfer in microelectronics production, and is mainly used in the production of mid-to-high-end semiconductor devices, such as integrated circuits, micro-electromechanical systems (MEMS), power devices, etc. Its function is to transfer the circuit pattern of the design pattern to the substrate or wafer of the next process through exposure technology for large-scale manufacturing. As the standard and template for pattern replication in the photolithography step, the mask is a bridge between industrial design and production manufacturing, and its accuracy and quality are directly related to the qualified rate of the final product. The mask must have good pattern transfer capabilities, including precise line width control, small pattern deviation and good imaging performance. The mask is a graphic master used in the photolithography process commonly used in micro-nano processing technology. The mask pattern structure is formed on the transparent substrate by an opaque light-shielding film, and then the graphic information is transferred to the product substrate through the exposure process. High-precision quartz mask substrates use high-purity quartz glass as the substrate, with the advantages of high transmittance, high flatness, and low expansion coefficient. They are usually used in high-precision mask products and have become the mainstream material for mid-to-high-end mask substrates. They are mainly used in flat panel display manufacturing and semiconductor manufacturing.

The global Quartz Glass Mask Blanks market size was estimated at USD 2750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00%

during the forecast period.
