## Abstracts

Quartz Rochon Polarizer is a polarization optical element based on quartz crystal. It uses the birefringence of quartz crystal to make the refractive index of o-light and e-light with mutually perpendicular vibration directions different in the crystal, and a certain separation angle will be formed when emitted, thereby achieving polarization separation. Quartz Rochon Polarizer has the characteristics of high polarization degree, wide band coverage and good stability. It is suitable for small and medium power optical systems and has broad application prospects in optical communications, spectral analysis, laser technology and scientific research.

The global Quartz Rochon Polarizer market size was estimated at USD 64.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
