## Abstracts

Quartz rod is a tubular object made of high-purity quartz glass or quartz crystal, usually cylindrical, with very good optical and physical properties. According to the difference in process, quartz rod can be divided into fused quartz and synthetic quartz. In the semiconductor industry, quartz rods are mainly used as components in diffusion furnaces and CVD processes. Quartz mainly includes natural quartz and synthetic quartz, and its shapes can be divided into quartz rings, quartz plates, quartz ingots, quartz rods, quartz tubes, etc. In the semiconductor quartz market, companies are mainly distributed in Japan, mainland China and Europe, of which Japan and mainland China account for more than 80% of the market share. Among them, the core semiconductor quartz companies are mainly Shin-Etsu, Hubei Feilihua, Tosoh, Heraeus, CoorsTek, etc. Quartz purity is the threshold for use in the semiconductor field. With the continuous advancement of downstream semiconductor manufacturing processes, the quality requirements for quartz rods will become higher and higher, and high-purity quartz rod products will become the mainstream trend of the market. At the same time, in the future, the size will develop towards large-scale size and customized specifications. On the one hand, large-size quartz rods can reduce costs; on the other hand, manufacturers need to customize production according to the needs of customers in different fields to meet the requirements of special application scenarios.

The global Quartz Rod for Semiconductor market size was estimated at USD 205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
