Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Quasi-solid-state Electrolytes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Quasi-solid-state electrolytes are a class of electrolyte materials used primarily in lithium-based batteries that combine the advantages of both liquid and solid electrolytes. They typically consist of a liquid electrolyte immobilized within a solid or gel-like matrix (such as polymers, inorganic frameworks, or composites), enabling improved ionic conductivity similar to liquids while offering enhanced mechanical stability and safety akin to solids. These electrolytes reduce the risk of leakage and flammability associated with liquid electrolytes while facilitating better electrode–electrolyte contact than fully solid-state systems. They are particularly promising for next-generation energy storage applications, including flexible, wearable, and high-energy-density batteries.Quasi-solid-state electrolytes are characterized by a combination of parameters that balance ionic conductivity, mechanical strength, and safety. They typically exhibit ionic conductivities in the range of 10?? to >10?? S/cm, with lithium-ion transference numbers from 0.2 to 0.5, and electrochemical stability windows extending up to 5.0 V, making them suitable for high-voltage cathodes. Their mechanical modulus ranges from soft gel-like textures to rigid composites (up to ~10 MPa), helping suppress dendrite growth when paired with lithium metal. These systems offer superior thermal stability (often over 120°C), minimal volatility or flammability due to low liquid content (10–70 wt%), and enhanced interfacial compatibility with electrodes through engineered SEI layers or surface coatings.

The global Quasi-solid-state Electrolytes market size was estimated at USD 25374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
