## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on R290 Air Source Heat Pump competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The R290 air source heat pump is an air source heat pump device that uses natural refrigerant propane (R290). R290 refrigerant is a hydrocarbon with extremely low global warming potential (GWP=3) and zero ozone depletion value (ODP=0), superior thermodynamic properties and high energy efficiency. Since R290 is a highly flammable refrigerant of Class A3, the equipment design and installation require higher safety design and leakage control, but its system is reliable and stable under compliant operating conditions; many studies have shown that the operating efficiency (COP) of R290 heat pumps is generally better than that of traditional high-GWP refrigerant systems. The R290 air source heat pump adopts full DC variable frequency technology, and the unit heating power is usually available in the range of 4~16kW, which can cover the heating needs of residential buildings of dozens to hundreds of square meters. In terms of price, depending on the capacity and function differences, the unit price of a typical residential unit is usually in the range of several thousand to tens of thousands of dollars. In terms of system output, these products usually support dual-mode output of heating/cooling, and integrate domestic hot water functions. They can also be linked with photovoltaic power generation or solar hot water systems to achieve smart home energy management. R290 air source heat pumps are widely used in residential heating and domestic hot water, commercial building heating/cooling, and heating of public facilities (greenhouses, swimming pools, etc.). They are also an important part of renewable energy systems such as photovoltaics + heat pumps. In 2024, the global R290 air source heat pump market size is about US\$780 million, and the compound annual growth rate is expected to be about 6.5% by

2031.

The global R290 Air Source Heat Pump market size was estimated at USD 787.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
