## Abstracts

A Tyre Warmer is an electric blanket-like device used to pre-heat racing tires to their optimal operating temperature before they are used on the track. They consist of a heating element encased in a fabric cover that wraps around the tire. By maintaining a consistent and controlled temperature, tire warmers improve tire grip and performance from the moment the vehicle leaves the pits, reducing warm-up time on the track and providing more consistent handling. This is crucial in motorsports where tire temperature significantly affects traction and lap times. The Tyre Warmer market is evolving alongside advancements in tire technology and the increasing demands of motorsports. Several key trends are shaping the industry. First, precision temperature control is becoming increasingly important. Manufacturers are developing tire warmers with more sophisticated temperature control systems, allowing teams to fine-tune tire temperatures to specific tire compounds and track conditions. Second, there's a growing focus on portability and ease of use. Wireless tire warmers and more compact designs are emerging, making them easier to transport and use in the pit lane. Third, data integration is becoming more prevalent. Some tire warmers are now integrating with data logging systems, allowing teams to monitor tire temperatures in real-time and correlate them with other performance data. Fourth, the use of advanced materials is increasing. Manufacturers are exploring new materials for the heating elements and the tire warmer covers to improve heat distribution, durability, and energy efficiency. Finally, customization is becoming more common. Teams are working closely with manufacturers to develop tire warmers tailored to their specific tire sizes, racing series regulations, and performance requirements. These trends are expected to continue driving innovation and improvement in the tire warmer market.

The global Tyre Warmer market size was estimated at USD 746.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the

forecast period.
