Report Overview

Most semiconductor electronic components are susceptible to radiation damage, and radiation-hardened (rad-hard) components are based on their non-hardened equivalents, with some exceptions. Rad Hard Buffer is the ideal choice for high frequency applications requiring output limiting, especially those requiring ultra-fast overload recovery times. Radiation-hardened chip technology tends to lag behind the most recent breakthroughs due to the significant development and testing necessary to produce a radiation-tolerant design of a microelectronic chip.
