The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Radial Flux Permanent Magnet Motors? competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global Radial Flux Permanent Magnet Motor industry produced about 2.9 million units with a capacity of 3.6 million units. Average unit price is about USD 2,000, while manufacturers maintain an average gross margin of 33%. Radial Flux Permanent Magnet (RFPM) Motors are electric machines in which the magnetic flux generated by permanent magnets flows radially?perpendicular to the rotor axis?through the air gap between the stator and rotor. This configuration is the most common in conventional motor designs and offers high torque density, compact structure, and good cooling performance. RFPM motors are widely used in electric vehicles, industrial drives, robotics, renewable energy systems, and appliances due to their efficiency and controllability. The supply chain typically starts upstream with raw materials such as rare-earth permanent magnets (e.g., neodymium?iron?boron), electrical steel laminations, copper wire, resins, and bearings. Midstream involves component manufacturing, including magnet production, stator and rotor lamination stacking, winding, and assembly of housings, shafts, and cooling systems. Downstream includes motor integration into end-use applications, system assembly (e.g., EV powertrains, HVAC units, or industrial equipment), distribution through OEMs and suppliers, and aftermarket services such as maintenance and part replacement.

The global Radial Flux Permanent Magnet Motors? market size was estimated at USD 5823.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
