Report Overview

Radiation Shielding Sheet is a material used for effective protection against harmful radiation. It is commonly made of lead, tin, or other heavy metal alloys, as these materials exhibit high atomic numbers and densities, which are effective at absorbing ionizing radiation. Radiation shielding sheets are commonly used in applications such as medical diagnostic and treatment facilities, nuclear power plants, and industrial radiography. They can be used to shield personnel, patients, and equipment from radiation exposure. The thickness, composition, and physical properties of radiation shielding sheets can be customized based on the specific application requirements and radiation source type. Some of the key factors that must be considered when selecting a radiation shielding sheet include the level and type of radiation, the exposure time, and the physical dimensions of the shield.
