## Abstracts

This type of diluent mainly contains groups that can participate in free radical polymerization, such as (meth)acrylate groups. Under the action of photoinitiators or thermal initiators, these groups can generate free radicals and initiate polymerization reactions to form a polymer network structure. Free radical polymerization reactions usually have a faster reaction rate and a higher conversion rate. Free radical reactive diluents are widely used in the fields of photocurable coatings, inks, adhesives, etc. They can give the cured products good hardness, wear resistance, chemical resistance and gloss.

The global Radical-type Reactive Diluent market size was estimated at USD 825.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
