Report Overview:

A radio transmitter is an electronic device which, when connected to an antenna, produces an electromagnetic signal such as in radio and television broadcasting, two way communications or radar. Heating devices, such as a microwave oven, although of similar design, are not usually called transmitters, in that they use the electromagnetic energy locally rather than transmitting it to another location.

A radio transmitter is usually part of a radio communication system which uses electromagnetic waves (radio waves) to transport information (in this case sound) over a distance.

In our report, the radio transmitters with power levels of 1kW to 500kW are included.

The Global Radio Transmitter Market Size was estimated at USD 338.16 million in 2023 and is projected to reach USD 348.43 million by 2029, exhibiting a CAGR of 0.50% during the forecast period.
