Abstracts

A walkie-talkie (more formally known as a handheld transceiver, or HT) is a hand-held, portable, two-way radio transceiver. Its development during the Second World War has been variously credited to Donald L. Hings, radio engineer Alfred J. Gross, and engineering teams at Motorola. Similar designs were created for other armed forces, and after the war, walkie-talkies spread to public safety and eventually commercial and jobsite work. Major characteristics include a half-duplex channel (only one radio transmits at a time, though any number can listen) and a "push-to-talk" (PTT) switch that starts transmission. Typical walkie-talkies resemble a telephone handset, possibly slightly larger but still a single unit, with an antenna mounted on the top of the unit. Where a phone"s earpiece is only loud enough to be heard by the user, a walkie-talkie"s built-in speaker can be heard by the user and those in the user"s immediate vicinity. Hand-held transceivers may be used to communicate between each other, or to vehicle-mounted or base stations.Global Walkie Talkie key players include Motorola, JVCKENWOOD, Icom, Hytera, Sepura, etc. Global top five manufacturers hold a share about 30%. China is the largest market, with a share about 50%, followed by North America, with a share about 10 percent. In terms of product, Digital Walkie Talkie is the largest segment, with a share about 60%. And in terms of application, the largest application is Government and Public Safety, followed by Utilities, Industry and Commerce, etc.

The global Radio Walkie-Talkie market size was estimated at USD 9348.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
