Abstracts

Radioactive Monitoring Solutions for Buildings and Building Materials are systems or devices used to detect the content of radioactive elements in buildings and building materials. Through online monitoring or sampling analysis, these solutions ensure building safety and indoor environmental health, comply with national and international radiation safety standards, and are widely used in residential and commercial buildings and building material production. The upstream of the industry chain includes suppliers of core components for radiation detectors, multichannel analyzer chips, shielded lead room materials, and data acquisition modules; the midstream consists of professional manufacturers with nuclear instrument R&D capabilities, requiring mastery of low-background measurement technology, spectral analysis algorithms, and metrological certification qualifications; the downstream mainly targets building material manufacturers, third-party testing institutions, housing and construction departments, environmental assessment units, and large real estate developers. Due to the involvement of nuclear safety and mandatory national standard compliance, the technical threshold is high, and customer loyalty is strong, with the overall industry gross profit margin between 30% and 45%.

The global Radioactive Monitoring Solutions for Buildings and Building Materials market size was estimated at USD 421.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
