## Abstracts

Radiopharmaceutical logistics refers to the comprehensive range of activities required to meet the distribution needs of radiopharmaceuticals from their production sources (e.g., pharmaceutical companies and radioisotope production facilities) to their end users (e.g., hospitals and nuclear medicine departments). These activities encompass transportation, storage, handling, packaging, distribution, and information processing, utilizing specialized logistics technologies, equipment, and management methods. This process not only adheres to the fundamental principles and processes of general pharmaceutical logistics but also fully considers the unique characteristics of radiopharmaceuticals, such as their radioactivity, short half-life, and high radiation protection requirements.
