Abstracts

Radiopharmacy isolators are specialized containment devices designed to provide a controlled, aseptic environment for the preparation, manipulation, and dispensing of radiopharmaceuticals, which are radioactive compounds used primarily in diagnostic imaging and therapeutic procedures. These isolators are engineered with integrated shielding—often lead or tungsten—to protect operators from radiation exposure while maintaining sterility through high-efficiency particulate air (HEPA) filtration and positive or negative pressure systems, ensuring both product integrity and occupational safety in nuclear medicine departments, research facilities, and commercial radiopharmacies.

The global Radiopharmacy Isolators market size was estimated at USD 348.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
