Abstracts

Radiosurgery uses a special focused beam of ionizing radiation directed at the patient. It is mainly used to treat tumors. High doses of radiation are delivered to tumors by directing beams of light across them in different directions. Before the introduction of real-time tissue tracking, radiosurgery was limited to brain treatment using a stereotaxic frame. However, due to the introduction of real-time tissue tracking systems in currently commercially available non-invasive radiosurgery robotic systems, the scope of reflex surgery treatments has increased significantly. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
