## Abstracts

Rail track renewal equipment refers to the machinery and tools used in the process of replacing or renewing railway tracks. This equipment is essential for maintaining the safety and efficiency of railway infrastructure. These machines are used to adjust and compact the ballast and sleepers (ties) to ensure the proper alignment and stability of the tracks. They use hydraulic or mechanical mechanisms to tamp the ballast and adjust the track geometry. These machines are used to lay and align new tracks during track renewal or construction. They can lift and position track components, such as rails, sleepers, and fastening systems, with high precision and efficiency. These machines are used to grind and smooth the surface of the rails, removing irregularities, corrosion, and fatigue cracks. Rail grinding helps improve ride quality, reduce noise, and extend the lifespan of the tracks.
