Report Overview:

Rail Wheels a type of Wheel specially designed for use on rail tracks. The Wheels is on the rails without guidance except for the shape of the tyre in relation to the rail head. Contrary to popular belief, the flanges should not touch the rails. Flanges are only a last resort to prevent the wheels becoming derailed - they're a safety feature. The Wheel tyre is coned and the rail head slightly curved.

Ideally, the Wheel profile should be determined by agreement between the railway infrastructure owner and the rolling stock owner. Of course, it varies from place to place but it is rarely a simple angle. It's usually a carefully calculated compound form. With respect to the rail angle, in the UK for example, it is set at 1 in 20 (1/20 or 0.05). In the US and France it's usually at 1/40. Light rail systems operating over roadways will have special profiles.

The Global Rail Wheel (Railway Wheel) Market Size was estimated at USD 3109.88 million in 2023 and is projected to reach USD 3522.88 million by 2029, exhibiting a CAGR of 2.10% during the forecast period.
