### Report Overview

A railcar mover is a road–rail vehicle (capable of travelling on both roads and rail tracks) fitted with couplers for moving small numbers of railroad cars around in a rail siding or small yard. They are extensively used by railroad customers because they are cheaper than owning a switcher locomotive, more convenient and cheaper than paying the railroad operator to do the switching, easier and more productive than manual moving of cars, and in addition they are more versatile since they can travel on road wheels to the cars they need to move, instead of needing clear track.

The Global Railcar Mover Market Size was estimated at USD 34.04 million in 2021 and is projected to reach USD 40.25 million by 2028, exhibiting a CAGR of 2.42% during the forecast period.
