Abstracts

Railways NDT Service is a non-destructive testing technology for railway track systems (including rails, welds, fasteners, sleepers, and trackbed). It aims to detect internal defects (such as cracks, pores, and inclusions), surface damage (such as wear, spalling, and indentations), geometric dimensional deviations (such as gauge, level, and height), and material performance degradation (such as fatigue and corrosion) through physical, electromagnetic, or acoustic methods without damaging the rail structure. This allows for the assessment of rail safety, reliability, and remaining life, providing a scientific basis for railway operations and maintenance.

The global Railways NDT Service market size was estimated at USD 587.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
