Abstracts

Rainscreen cladding systems are non-structural, external facade systems designed to protect buildings from weather elements while enhancing energy efficiency and aesthetic flexibility; they consist of an outer layer (cladding panels), a ventilated cavity that allows air circulation to manage moisture and thermal performance, and an inner insulation layer attached to the building structure, functioning as a dual-barrier system that mitigates rain penetration, reduces thermal bridging, and improves durability by allowing drainage and evaporation.

The global Rainscreen Cladding Systems market size was estimated at USD 5462.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
