Report Overview

Raman Fiber Lasers are a type of laser that utilizes the Raman effect to generate laser light. The Raman effect occurs when light interacts with the vibrational modes of a material, leading to a shift in the wavelength of the light. In Raman Fiber Lasers, a pump laser is used to excite the vibrational modes of a fiber optic material, resulting in the generation of laser light at a different wavelength. These lasers are known for their high efficiency, narrow linewidth, and tunability, making them suitable for a wide range of applications such as telecommunications, spectroscopy, and materials processing.
