## Abstracts

Rapid self-healing gel refers to a class of advanced polymer-based or supramolecular materials designed to autonomously repair physical damage?such as cuts, scratches, or punctures?without external intervention. These gels typically consist of dynamic chemical bonds or reversible physical interactions that allow them to re-form connections after being disrupted, restoring structural integrity and functionality. Key characteristics include high elasticity, tunable mechanical properties, and responsiveness to stimuli like heat, light, or moisture. Applications span industries such as electronics (for flexible and durable circuits or sensors), biomedical devices (sealants, wound dressings, drug delivery systems), soft robotics, protective coatings, and consumer products like scratch-resistant screens or self-repairing tires. Performance is often measured by healing efficiency, speed, repeatability, and environmental adaptability.

The global Rapid Self Healing Gel market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
