Abstracts

Rapid Thermal Process (RTP) ovens are advanced semiconductor manufacturing tools designed for precise, short-duration thermal processing of wafers at elevated temperatures, typically ranging from 600°C to 1300°C, with heating and cooling rates significantly faster than conventional furnace systems. These systems utilize high-intensity lamps or other radiative heating sources to achieve rapid temperature ramping, enabling critical fabrication steps such as annealing, oxidation, silicidation, and dopant activation while minimizing thermal budget and unwanted diffusion. Key features include single-wafer processing capability, excellent temperature uniformity, and reduced thermal stress, making RTP ovens essential for advanced node technologies where precise thermal control is critical to device performance and yield.

The global Rapid Thermal Process Oven market size was estimated at USD 245.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
