Abstracts

Rare autoinflammatory diseases drugs are medications designed to treat conditions where the body's immune system mistakenly attacks itself, causing recurrent inflammation without external infection. Unlike autoimmune diseases, where the immune response is triggered by the body's own tissues, autoinflammatory diseases stem from problems within the innate immune system. These diseases are often genetic and extremely rare, such as familial Mediterranean fever (FMF) and cryopyrin-associated periodic syndromes (CAPS). Specialized drugs are developed to target inflammatory pathways, aiming to reduce symptoms and improve patients' quality of life.

The global Rare Autoinflammatory Diseases Drug market size was estimated at USD 14350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
