Abstracts

Rare Disease Therapy Solutions typically refer to precision intervention products targeting diseases affecting less than 0.05% of the population. These encompass gene replacement therapies, monoclonal antibodies, small molecule drugs, RNA interventions, cell therapy, and supporting diagnostic tests and disease management tools. Due to their long development cycles (usually 8-12 years), scarcity of clinical samples, high production complexity, and stringent regulatory approvals, the market size for these products is small, but they possess extremely high technological barriers and unit value. The future lies in breakthroughs in gene editing therapies, lower-cost large-scale production, expanded indications, and the normalization of precision screening, enabling them to transition from "orphan drugs" to more accessible precision medicine solutions.

The global Rare Disease Therapy Solutions market size was estimated at USD 6393.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.20% during the forecast period.
