### Report Overview:

RAS-based Aquaculture is a type of land-based aquaculture based on RAS technology utilized to raise a variety of aquaculture species, including Atlantic salmon, in a highly controlled environment. RAS technology offers the ability to effectively capture and repurpose wastes—reducing environmental impact—to enhance biosecurity to prevent fish escapement, minimize pathogen entry or release to the surrounding environment, and highly control the rearing environment for increased fish performance and welfare. It also increases flexibility in site selection for proximity to markets. Farming fish locally to the market improves sales, reduces transportation costs, requires a smaller carbon footprint, improves traceability and product freshness, and supports the economy in local communities.

The Global RAS-based Aquaculture Market Size was estimated at USD 1239.97 million in 2023 and is projected to reach USD 2823.52 million by 2029, exhibiting a CAGR of 14.70% during the forecast period.
