Report Overview

Rat isotyping kits biotinylated monoclonal anti-rat isotype specific or light chain specific capture antibodies bind to the Streptavidin coated plate. Ig Isotype present in the positive control or sample binds to the specific capture antibodies and is simultaneously bound by the HRP-conjugated detector antibody. Following incubation unbound reagents and sample components are removed during a wash step, and substrate solution reactive with HRP is added to the wells. A colored product is formed in proportion to the amount of soluble rat Ig (H+L) present in the sample.
