Abstracts

A raw mill is the equipment used to grind raw materials into "rawmix" during the manufacture of cement. Rawmix is then fed to a cement kiln, which transforms it into clinker, which is then ground to make cement in the cement mill. The rawmilling stage of the process effectively defines the chemistry (and therefore physical properties) of the finished cement, and has a large effect upon the efficiency of the whole manufacturing process.

The global Raw Mill market size was estimated at USD 2311.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
