Abstracts

Raw needle coke is a specialized form of petroleum coke with a needle-like crystalline structure. It possesses high thermal conductivity, low thermal expansion coefficient, and high strength, making it ideal for producing graphite electrodes for steelmaking and anode materials for lithium-ion batteries. In recent years, the demand for needle coke has surged due to the increasing global steel demand and the rapid growth of the electric vehicle industry. However, the complex production process and stringent requirements for raw material quality and production technology limit the production capacity of needle coke. Moreover, growing environmental concerns have imposed stricter regulations on the production and use of needle coke.

The global Raw Needle Coke market size was estimated at USD 3163.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
