Abstracts

RCLED (Resonant Cavity LED) chips are a type of light-emitting diode (LED) that are designed to produce a narrow, intense beam of light. Unlike traditional LEDs, which emit light in all directions, RCLEDs are constructed using a resonant cavity that allows the light to be emitted in a specific direction. This makes them particularly useful for applications where a high level of directional control is required, such as in optical communications and sensing systems. RCLEDs are typically constructed using advanced semiconductor manufacturing techniques, such as molecular beam epitaxy (MBE) and metal organic chemical vapor deposition (MOCVD), to create precise and uniform structures with high levels of efficiency and reliability.

The global RCLED (Resonant Cavity LED) Chips market size was estimated at USD 300.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
