Abstracts

A reach stacker is a vehicle used for handling intermodal cargo containers in small terminals or medium-sized ports. Reach stackers are able to transport a container short distances very quickly and pile them in various rows depending on its access. Reach stackers have gained ground in container handling in most markets because of their flexibility and higher stacking and storage capacity when compared to forklift trucks. Using reach stackers, container blocks can be kept 4-deep due to second row access. Global Reach Stacker key players include Kalmar, Hyster, Terex, CVS Ferrari, Konecranes, etc. Global top five manufacturers hold a share over 65%. Europe is the largest market, with a share about 55%, followed by China, and North America, both have a share over 30 percent. In terms of product, Between 30 -45Tonnes is the largest segment, with a share over 70%. And in terms of application, the largest application is Intermodal Freight Transport, followed by Port Container, etc.

The global Reach Stacker market size was estimated at USD 512.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
