## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reactive Emulsifiers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of reactive emulsifiers reached 286,000 tons, with an average selling price of \$2,450/ton. Reactive emulsifiers are surfactants that stabilize the dispersion and chemically bind to polymer chains during emulsion polymerization or emulsification reactions. Their molecules typically contain functional groups (such as double bonds, epoxy groups, and isocyanate groups) that can participate in polymerization. These groups can be copolymerized into the polymer chain during emulsion polymerization, significantly improving the emulsion's stability, water resistance, migration resistance, and final coating performance. Reactive emulsifiers are widely used in the production of water-based coatings, adhesives, textile auxiliaries, papermaking, leather processing, and specialty emulsion products, mitigating performance degradation associated with migration and precipitation of traditional emulsifiers.

The global Reactive Emulsifiers market size was estimated at USD 701.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Reactive Emulsifiers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
