## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reactor Main Coolant Piping competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Reactor Main Coolant Piping refers to the primary piping system in a nuclear power plant that transports the reactor's primary coolant between the reactor core and the steam generators (or directly to the turbines in some designs). This piping is a critical component of the reactor's primary loop, responsible for removing heat generated in the reactor core and maintaining safe reactor operation. In 2024, global Reactor Main Coolant Piping Industry production reached approximately 895 units, with an average global market price of around US\$ 170 K per unit. The production capacity for Reactor Main Coolant Piping Industry in 2024 was approximately 900 units. The typical gross profit margin for Reactor Main Coolant Piping Industry is between 25% and 35%. Reactor Main Coolant Piping (MCP) is a critical pressure-bearing pipeline system in nuclear power plants, responsible for transferring heat from the reactor core to steam generators or heat exchangers. Upstream of the industry chain includes suppliers of high-performance nuclear-grade steel pipes, welding and machining equipment, anti-corrosion and surface treatment materials, as well as manufacturers of precision welding, machining, and non-destructive testing (NDT) equipment. Downstream, the main customers are nuclear power plant installation and maintenance teams, nuclear EPC contractors, and nuclear island system integrators, extending to construction units and nuclear safety inspection agencies. The industry chain is highly specialized, with stringent requirements on material performance, welding quality, and non-destructive inspection.

The global Reactor Main Coolant Piping market size was estimated at USD 132.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
