Abstracts

Reagent grade lyticase is a highly purified enzyme preparation derived from microbial sources, primarily *Arthrobacter luteus*, which is specifically engineered and standardized for laboratory and research applications to enzymatically degrade yeast and fungal cell walls by hydrolyzing β -1,3-glucan linkages. This grade of lyticase is characterized by its strict quality controls, minimal contamination from proteases or nucleases, batch-to-batch consistency, and defined activity units, ensuring reliability and reproducibility in critical procedures such as protoplast preparation, protein extraction, molecular biology workflows, and cellular studies where cell wall disruption must be precise and non-destructive to intracellular components.

The global Reagent Grade Lyticase market size was estimated at USD 24.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
