Report Overview

Reagent grade tyrosinase refers to a form of the enzyme tyrosinase that has been purified and standardized for use in laboratory settings. Tyrosinase is a copper-containing enzyme that catalyzes the oxidation of the amino acid tyrosine into dopaquinone, which is a key step in the synthesis of melanin, the pigment responsible for the color of skin, hair, and eyes in humans and animals. They are often used in biochemical research, pharmaceutical development, and quality control testing. In the case of tyrosinase, it can be utilized in assays to measure the activity of tyrosinase inhibitors, which are of interest in the cosmetic industry for their potential to reduce skin pigmentation disorders like hyperpigmentation or age spots.
