## Abstracts

Real-time Dosimeter is an electronic device that continuously measures and monitors ionizing radiation exposure, providing instantaneous feedback to the user. Unlike passive dosimeters, which require post-exposure analysis, real-time dosimeters alert wearers immediately when radiation levels approach or exceed predefined thresholds, enhancing safety in environments with fluctuating radiation levels. These devices are particularly valuable in medical settings, such as interventional radiology, where they enable healthcare professionals to monitor their radiation exposure in real time and take immediate action to minimize unnecessary exposure.

The global Real-time Dosimeter market size was estimated at USD 366.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
