Real-time X-ray systems, also known as fluoroscopy systems, are advanced imaging devices that utilize continuous X-ray beams to produce live, dynamic images of internal structures, allowing for the observation of motion and function in real time across various applications including medical diagnostics, interventional procedures, security screening, and industrial non-destructive testing. These systems consist of an X-ray source, a detector, and processing software that together generate instantaneous feedback, distinguishing them from traditional static X-ray imaging by providing temporal resolution critical for procedures such as gastrointestinal studies, angiography, orthopedic surgeries, baggage inspection at airports, and quality control in manufacturing. The technology's core value lies in its ability to capture and display processes as they occur, enabling immediate decision-making and intervention without the delays associated with image development or post-processing.

The global Real Time X Ray System market size was estimated at USD 820.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
