## Abstracts

Fundamentally, tokenization is creating a digital token on a blockchain from ownership rights of a real-world item. These tokens provide a digital copy of the asset that facilitates simpler transactions, tracking, and administration. From actual assets like real estate and art to financial instruments like bonds and shares, and even intangible assets like intellectual property or royalties, the asset being tokenized might be anything. By breaking down huge, illiquid assets into smaller, more manageable pieces, tokenization is making traditional asset management obsolete and making massive assets available to more people. A multi-million dollar estate, for instance, can be tokenized into hundreds or thousands of digital tokens, enabling investors to buy fractional ownership instead of the whole estate.

The global Real World Asset (RWA) Tokenization Solution market size was estimated at USD 1593.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
