Abstracts

A rear derailleur pulley, more commonly referred to as a jockey wheel or derailleur pulley, is a small, toothed wheel mounted within the rear derailleur of a bicycle that guides the chain between the cassette sprockets during gear shifts. These components are typically made from durable materials such as nylon composites, aluminum, or carbon fiber and are designed with specific tooth profiles to optimize chain retention, reduce friction, and enhance shifting precision. The pulley system usually consists of two wheels: an upper pulley (guide pulley) that directs the chain onto the cassette and a lower pulley (tension pulley) that maintains proper chain tension.

The global Rear Derailleur Pulley market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
