Abstracts

A rebar grout coupler is a mechanical connector used in construction to join two steel reinforcing bars (rebar) through a grout-filled sleeve. This system provides a strong, reliable connection between rebars in structural elements like columns, beams, and walls. The sleeve is typically made from steel and is filled with high-strength grout, which bonds the rebar ends securely, ensuring load transfer and structural integrity. Rebar grout sleeves are commonly used in precast concrete construction, seismic retrofitting, and projects where precise, robust connections are critical. They simplify assembly, enhance joint strength, and are particularly useful in applications where traditional welding or lapping is impractical. The global key Rebar Grout Coupler manufacturers include Tokyo Tekko, Dextra Group and Levia (CRH plc), and the top three players revenue share is 45.00% in 2023. However, in the future, more and more players will enter the market and the Top 3 players market share will go down a little. There are mainly two type products of Rebar Grout Coupler: Full-grout Coupler and Half-grout Coupler. Among them, the Full-grout Coupler take a main position with 57.16% market share of 2023. In the future, the precast building formwork will increase and become a mainstream, so the Half-grout Coupler will increase. In the downstream of the product, the building construction dominates, shared a 60.23%% in the 2023 market. With the development of new energy infrastructure and civil transportation, the building construction market share will go down in the future. Government in each region will pay more attention to the safety and fire protection of the building. Therefore, manufacturers need to increase the performance of their product.

The global Rebar Grout Coupler market size was estimated at USD 127.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
