Abstracts

A recessed handle, commonly used in devices and fittings like machinery and doors, is a type of handle that is embedded into the side of a device or fixture, creating a sunken area for grip. These handles typically have a lower load-bearing capacity and are designed primarily for operating and carrying lighter objects. Recessed handles are frequently installed on equipment and fixtures to aid in operation and transportation. They are characterized by their inset design, which doesn't protrude from the surface, making them ideal for space-saving installations. They are used in various settings, including on doors, machinery, drawers, and storage solutions. Folding handles, which are stored within a recessed base and lifted for use, are also a popular type of recessed handle, particularly for wall and floor storage solutions.

The global Recessed Handle market size was estimated at USD 794.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
