Abstracts

A Reciprocating Air Compressor is a positive displacement compressor that uses a crankshaft-driven piston and cylinder to compress the air. According to the technology, it can be divided into single stage air compressors and two stage air compressors. A single-stage reciprocating piston compressor works by drawing the air into the cylinder where it is compressed in a single piston stroke of approximately 120 PSI and then sent to a storage tank. A two-stage compressor includes an additional step where the air is compressed by a second, smaller piston to a pressure of up to 175 PSI.

The global Reciprocating Air Compressor market size was estimated at USD 1429.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
