Report Overview:

Recirculating Aquaculture Systems (RAS) for salmon refer to a modern and sophisticated method of raising salmon in a controlled environment that allows for the efficient and sustainable production of fish. RAS technology is designed to replicate the fish's natural habitat as closely as possible while minimizing environmental impact and optimizing resource utilization.

In a Recirculating Aquaculture System for salmon, fish are raised in tanks or enclosures within a controlled facility. The system is designed to recirculate and filter water, creating a closed-loop environment where water is treated, cleaned, and reused, thus minimizing the need for continuous water exchange. This is in contrast to traditional open-net pen aquaculture, where fish are raised in natural bodies of water and have less controlled conditions.

The Global Recirculating Aquaculture Systems Salmon Market Size was estimated at USD 655.48 million in 2023 and is projected to reach USD 2561.07 million by 2029, exhibiting a CAGR of 25.50% during the forecast period.
