Abstracts

Reclaimed Carbon Black (RCB) is a recycled material derived from end-of-life tires and other rubber products through pyrolysis or other thermal decomposition processes, which break down the rubber into reusable components, including carbon black. Unlike virgin carbon black produced from petroleum or natural gas, RCB is considered a sustainable alternative, offering similar reinforcing properties in rubber and plastic applications while reducing environmental impact by diverting waste from landfills and lowering carbon emissions associated with traditional manufacturing.

The global Reclaimed Carbon Black (Rcb) market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
