Abstracts

Devulcanized regenerated rubber, also known as devulcanized rubber powder or powdered regenerated rubber, is a new type of material made from vulcanized rubber powder through a suitable desulfurization method. In this process, the cross-linking bonds of the vulcanized rubber are destroyed and converted into powdered regenerated rubber that is plastic, processable and re-vulcanizable. It is expected that the global regenerated rubber market will continue to grow in the next few years, and devulcanized regenerated rubber, as an important component of it, will also maintain a steady growth trend. China is a major producer of regenerated rubber, and devulcanized regenerated rubber has broad development prospects in the Chinese market. With the country's emphasis on environmental protection and resource recycling, the application of devulcanized regenerated rubber will be further promoted and popularized. With the rapid development of the rubber products industry and the increasing demand of consumers for environmentally friendly products, the market demand for devulcanized regenerated rubber will continue to grow. Especially in the tire, rubber products, construction and other industries, the application of devulcanized regenerated rubber will be more extensive. The continuous emergence of new desulfurization technology and regenerated rubber technology will further improve the performance and quality of devulcanized regenerated rubber and meet the diversified needs of the market. This will help promote the continuous expansion of the market size of devulcanized regenerated rubber.

The global Reclaimed Rubber from Devulcanization market size was estimated at USD 2561.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
