## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Recombinant Collagen Liquid Dressing competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Recombinant collagen liquid dressing is a high-end medical dressing that uses humanized collagen (usually type III) synthesized using genetic engineering technology and is used in liquid form to promote skin wound repair. Its core ingredients are obtained through a recombinant expression system (such as *Escherichia coli*, yeast or mammalian cells), and are highly biocompatible and safe. They can significantly simulate the natural collagen structure of the human body and avoid the immune response and disease transmission risks caused by animal-derived collagen. This type of dressing is usually a transparent or light yellow fluid that can be directly sprayed or dripped on the surface of the wound, quickly forming a film, providing an excellent scaffold environment for cells, promoting fibroblast proliferation and angiogenesis, and accelerating epithelial regeneration and tissue repair.

The global Recombinant Collagen Liquid Dressing market size was estimated at USD 95.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
