Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Recombinant Collagen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Recombinant collagen is a template based on the amino acid sequence of collagen in organisms. It is designed reasonably, cut and spliced, and then transferred to engineered cells mainly composed of *E. coli* and *Pichia* with the help of synthetic biology technology, and the obtained collagen is prepared using the rapid production capacity of engineered cells. If human collagen is used as a template, the recombinant collagen obtained by design and splicing is called recombinant human collagen. Technical breakthroughs have promoted the continuous expansion of the application field of recombinant collagen, from the initial functional skin care products to scalp care products, health foods for sports recovery and beauty. Professor Sun Lingyun's team and Yang Yang used recombinant collagen as raw material to build tissue engineering scaffolds using biological cell 3D printing and electrospinning, expanding the scope of application research on recombinant collagen in the field of regenerative medicine. In order to standardize the development of the industry, the State Food and Drug Administration has successively issued a number of industry standards and policies, respectively making standardized requirements for the naming of recombinant collagen biomaterials, product supervision and management, and quality control. In March 2021, the "Guiding Principles for Naming Recombinant Collagen Biomaterials" was promulgated; in April 2021, the "Principles for Classification of Recombinant Collagen Medical Products" was promulgated; in August 2022, the "Recombinant Collagen" industry standard was officially implemented; in July 2023, the "Recombinant Humanized Collagen" medical device industry standard was officially implemented. In order to better guide and standardize the naming of recombinant

collagen medical devices, in January 2023, the Medical Device Standard Management Center of the State Drug Administration also issued an interpretation of the "Guiding Principles for the Naming of Recombinant Collagen Biomaterials".

The global Recombinant Collagen market size was estimated at USD 153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 63.20% during the forecast period.
